Preparing 200 L of 10x PBS Buffer Concentrate using a Pall® Magnetic Mixer

Mixing system: Pall Magnetic Mixer
Mixing biocontainer: 200 L Mixer biocontainer
Mixing type: Powder-liquid

The Pall Magnetic Mixer is a compact single-use mixing system. The heart of this system is a mixing biocontainer incorporating an innovative bottom-mounted magnetically-driven impeller capable of providing efficient high-torque mixing for all powder-liquid and liquid-liquid mixing applications. The impeller rides on a low-friction, inert bearing assembly designed to ensure low particle shedding while allowing mixing of high powder loads in large liquid volumes.

Introduction

Powder-liquid mixing is a common requirement in biopharmaceutical processing. In order to maximize mixing efficiency for powder-liquid applications, the Magnetic Mixer is available with a 16.13 cm (6.35 inch) impeller.

In this experiment, a Magnetic Mixer was used to prepare a quantity of a 10x concentrated solution of phosphate buffered saline (PBS), a buffer that is ubiquitous in downstream bioprocess steps.

Experimental

A 200 L Magnetic Mixer biocontainer was filled with 160 L of water, and mixing speed was set to 300 rpm. Powder buffer components were added all at once via a Pall powder bag; 16 kg NaCl + 0.4 kg KCl + 2.88 kg Na₂HPO₄·12H₂O + 0.48 kg KH₂PO₄. The solution homogeneity was monitored via real-time conductivity and pH readings.
Results

After the buffer powder addition, conductivity and pH data indicated that mixing was complete within approximately 10 minutes.

Solution homogeneity in the biocontainer during mixing

Conclusions

The Pall Magnetic Mixer system is well suited to preparation of high-concentration buffer solutions. A powder-liquid mixing biocontainer, which includes a large, bearing-mounted magnetic impeller, is a good choice for such applications. Mixing times in the 10 minute range are typical at the tested volume and concentration.
