service instructions

EN UR610/690 Service Instructions

M&ESI610ENa

1 Specifications

Housing materials:
Head, cover and tube: Aluminium

Maximum operating pressure:
28 bar (400 psi)

Proof pressure:
41 bar (600 psi)

Minimum burst pressure:
110 bar (1600 psi)

Element burst pressure:
UE610 element 10 bar (150 psid) differential minimum

Operating temperature range:
-29°C to 120°C (-20°F to 250°F) with fluorocarbon seals for petroleum based and specified synthetic fluids.
60°C (140°F) maximum in HWCF, water-oil emulsion or water glycol

Bypass valve setting options:
1.7 ± 0.2 bard (25 ± 3 psid) cracking pressure
4.5 ± 0.5 bard (65 ± 7 psid) cracking pressure

Seals:
Fluorocarbon
The actual operating conditions should be checked by the user to ensure that the element, housing and all seals are compatible with the fluid and application, and are within local safety codes. Please contact Pall or an approved distributor if further information is required.

2 Receipt of equipment

The filter housing, and any optional equipment, are packed individually for assembly by the customer. Unpack carefully and ensure optional items are not mislaid in packaging to be discarded.

3 General sources of information

3.1 For dimensions, operating parameters, assembly/element part number, ordering information, notes, performance data and specifications refer to datasheet.

3.2 This equipment has been assessed in accordance with the guidelines laid down in the European Pressure Equipment Directive 2014/68/EU and has been classified within sound engineering practice S.E.P. We hereby declare the equipment meets the requirements of Article 4 paragraph 3 thus meeting the directive requirements. Under the provisions of the directive the filter assembly is suitable for use with group 2 fluids only.

3.3 Where under reasonably foreseeable conditions, including external fires, the allowable limits could be exceeded, suitable protective devices must be installed by the customer within the connecting fluid system.

4 Installation of housing

4.1 The filter can be installed in any attitude, but for ease of servicing, it is recommended that it be installed vertically with the filter tube and cover pointing upwards.

4.2 The minimum clearance required for element removal is as follows:
4.2.1 552mm or 21.7” for length 20 and 1060mm or 41.7” for length 40 assemblies.
4.2.2 The UR610/UR690 Housing is supplied without a filter element. For element installation and servicing procedures, refer to Section 7.

4.3 Threaded differential pressure devices, when fitted, must be torque tightened to 40 lbft or 54 Nm. All visual indicators must be clearly visible

NOTE: The UR610/UR690 housing is supplied with two machined differential pressure warning device ports, one fitted with a blanking plug, the other with a plastic shipping plug. If no differential pressure warning device is ordered, the shipping plug must be removed and replaced with a ‘B’ type blanking plug (P/N HA9000-A104Z) and torque tightened to 40 ft/lb /54 Nm. NEVER: Never place the port plug in this port without first installing uniform size -014 O-ring in lower O-ring groove, otherwise a small bypass flow will result, allowing contaminant downstream of the filter element.

4.4 Mount the filter assembly in position using the mounting bracket kit (12) (if provided). Brackets require four .375” (10mm) bolts each.

4.4.1 UR610/UR690 - Four additional mounting holes with 1/2”-13UNC threads (for A and D ports) or M12x1.75-6H threads (for C and F ports) are provided at the inlet port for mounting the assembly, using the appropriate gasket, to the top of a reservoir or manifold.

4.4.2 Torque bolts to: 16 lbft (22 Nm) minimum for .375” (10mm) size bolts and 20-25 lbft (27-34 Nm) for 1/2”-13 UNC or M12x1.75-6H bolts.

4.5 Use a check valve downstream of the filter if there is a possibility of reverse flow.

4.6 Install the filter housing using additional piping/valving to allow complete filter assembly bypass if filter maintenance is required without system shutdown.

CAUTION: Never operate the filter unless both warning device ports are sealed.

NOTE: Piping supports should be provided as close as is practicable to the port connections in order to minimize external loads. This filter assembly must not be electronically isolated from the users earthing system. This filter assembly must be earthed by connecting the users earthing system to one of the inlet/outlet connections.

4.7 Connect lines or hoses to housing inlet and outlet ports.
6 Differential pressure devices

Reference should be made to product literature for dimensions, operating parameters, part numbering, ordering information and specifications.

6.1 Differential pressure devices actuate when the element needs changing or because of high fluid viscosity in 'cold start' conditions.

6.2 If stainless steel visual indicator is fitted and actuates during 'cold start' (red button extends 5mm, 3/16"), reset by depressing the button when the normal operating temperature is reached. If indicator actuates after resetting, replace element. If brass visual indicator is fitted and actuates during 'cold start' (flag inside indicator changes to red), it will automatically reset when normal operating temperature is reached. If indicator is still actuated after normal operating temperature is reached, replace element.

NOTE: Option 'P' visual indicator has thermal lockout and manual reset. No signal below 0°C (32°F), signal above 29°C (80°F).

6.3 If the electrical switch actuates (e.g. red light comes on) during cold start, continue operating until the signal (red light) goes out as system warms to normal operating temperature. This feature can be used as 'warm up' indication in operating procedures. If the warning signal (red light) remains or appears when system is warm, replace the filter element.

6.4 Use of both positive indication (green light) and negative indication (red light for dirty element) is recommended to effectively monitor filter element life.

Electrical connections and ratings are dependent on indicator chosen. Typical values only are shown below:

- **110 VAC** = 4A (inductive), 4A (resistive)
- **220 VAC** = 4A (inductive), 4A (resistive)
- **28 VDC** = 3A (inductive), 5A (resistive)
- **48 VDC** = 1A (inductive), 1.5A (resistive)
- **125 VDC** = 0.25A (inductive), 0.5A (resistive)

Maximum inrush - 24 amps.

Underwriter’s lab. Inc. listed ratings of pressure switch (Microswitch) options are:

- 4 amps at 250 VAC
- 0.25 amp resistive at 220 VDC
- 0.5 amp resistive at 110 VDC

Electrical differential pressure switch operation:

When preset differential pressure is exceeded continuity switches from Normally Closed (NC) - Common to Normally Open (NO) - Common.

When differential pressure decreases below pre-set value, continuity returns to Normally Open (NO) - Common to Normally Closed (NC) - Common.

**Figure 1 - Switch Circuit Diagram**

See individual indicator options for connection details.
7 Filter element servicing
During servicing, the external surfaces of the filter assembly must be cleaned to remove any dust deposits including the threads of the tube and cover.
Servicing must be conducted using suitable tools that do not present a hazard.
Servicing must not be carried out when a potentially explosive atmosphere is present.

CAUTION:
Filter elements should be replaced upon indication or at specified intervals, six months maximum. Failure to change the element will cause the filter to go on bypass.

Refer to Service Parts List (Section 10) for item numbers for applicable replacement element series. Remove and replace element as follows:

7.1 Turn off and depressurize the system. Open vent plug (9) at top of filter on the cover assembly (4) one and one-half turns.

7.2 Open one or both drain plugs (10) on bottom of filter head and drain housing. Reinstall and tighten drain plug(s).

7.3 A tool (socket or box wrench not a pipe wrench) should be used to remove the cover assembly by turning counter clockwise.

Note: The UR610/690 series assembly is equipped with an extraction mechanism within the cover assembly. Turn the cover counterclockwise until cover threads disengage then lift the cover to pull the element free from its cage. Cover can now be removed, making the element accessible.

7.4 Remove filter element (7) and carefully inspect the surface for visible contamination. Normally no dirt should show, but visible dirt or particles can be an early warning of system component breakdown and can indicate potential failure.
Discard both the filter element and its O-ring (5a). The filter element is NOT CLEANABLE. Any attempt to clean the filter element can cause degradation of the filter medium and allow contaminated fluid to pass through the filter element.

7.5 Inspect filter cover assembly (4) including threads for possible damage or malfunction. Replace any damaged parts. Remove any accumulated dirt. DO NOT run the system without a filter element installed. Check that the O-ring on the cover (5b) assembly is not damaged. Use replacement filter element part number called for on assembly nameplate.

7.6 Lubricate the element O-rings with clean system fluid and install element into the cover assembly then install into its cage (shell) assembly (3). Reset the visual indicator, if fitted, before refitting cover. Lightly lubricate cover O-ring with clean system fluid, apply anti seize (Loctite #39901 or equal) to tube threads to prevent galling and refill cover assembly onto the tube. HAND TIGHTEN cover until cover assembly and tube are bottomed together. O-ring sealing is not improved by over tightening. USE A TOOL (SOCKET OR BOX WRENCH NOT A PIPE WRENCH) TO TIGHTEN COVER USING THE HEX TO PROPER TORQUE OF 50-60 LBFT (68-81 Nm).

7.7 Open vent plug (9) on housing and pressurize system. This allows clean pressurized fluid to fill the housing and bleed off air.

7.8 Close vent plug on appearance of clear fluid. Check for leaks.

7.9 After element change ENSURE DIFFERENTIAL PRESSURE DEVICE IS RESET. Brass visual and electrical and stainless steel electrical switches reset automatically. When system reaches normal operating temperature, check that the electrical switch and/or visual warning button/flag has not actuated. If visual indicator actuates due to a cold start condition, reset again as per section 6.

8 Warranty, Limitation of Liability and Remedies
THERE IS NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE WITH RESPECT TO ANY OF THE PRODUCTS, NOR IS THERE ANY OTHER WARRANTY EXPRESS OR IMPLIED, EXCEPT AS PROVIDED FOR HEREIN.

For a period of twelve months from the date of delivery from Seller or three thousand hours of use, whichever occurs first (the “Warranty Period”), Seller warrants that products manufactured by Seller when properly installed and maintained, and operated at ratings, specifications and design conditions, will be free from defects in material and workmanship. By way of explanation and not limitation, the Seller does not warrant the service life of the filter element as this is beyond the Seller’s control and depends upon the condition of the system into which the filter is installed.

Seller’s liability under any warranty is limited solely (in Seller’s discretion) to replacing (FOB original ship point), repairing or issuing credit for products that become defective during the Warranty Period. Purchaser shall notify Seller promptly in writing of any claims and provide Seller with an opportunity to inspect and test the product claimed to be defective. Buyer shall provide Seller with a copy of the original invoice for the product, and prepay all freight charges to return any products to Seller’s factory, or other facility designated by Seller. All claims must be accompanied by full particulars, including system operating conditions, if applicable. Seller shall not be liable for any product altered outside of the Seller’s factory except by Seller or Seller’s authorized distributor, and then, as to the latter, only for products which have been assembled by the distributor in accordance with Seller’s written instructions. Nor shall Seller be liable for a product subjected to misuse, abuse, improper installation, application, operation, maintenance or repair, alteration, accident or negligence in use, storage transportation or handling. In no event will Seller be liable for any damages, incidental, consequential or otherwise, whether arising out of or in connection with the manufacture, packaging, delivery, storage, use, misuse, or non use of any of its products or any other cause whatsoever.
